Integrative Functional  
Medicines*

Cancer Immuno-Therapy with 'Yod-Ying Protocol' under BVRC

## The needs for genuine health support

Master Anugoonpisarngit was initially treated with anti-angiogenesis, reducing blood supply to cancer cells, more than 10 years ago. Yet he did not feel healthy afterwards and was afraid that the cancer could recur. Furthermore, as he was regularly monitored at the hospital, he was also given loads of medications which he knew not what they do but was reluctant to take all as he felt they could do more harm than help if taken for a long period. So he chose to be supported through with the Yod-Ying protocols to help gain genuine health and vitality in the long run while keeping cancer at bay.

## State of health prior to beginning the therapy

As a monk who is fed what to eat, he knew not what it means to eat healthily. He also had sedentary lifestyles. Consequently he was already unhealthy on top of being rather weak after hospital treatments. He was unfit, feeble and rather frail.

**1**

### AWARENESS

True healing begins when there is a realization for the need to heal.

**2**

### TRUST

Leads to genuine peace and inner physiological cooperation at all levels.

**3**

### OBEDIENCE

Arises from self respect is always a solid staircase to veritable therapeutic outcomes.

## Entering Therapy With:

Liver cancer with underlying viral hepatitis B & metabolic syndrome

## When:

20XX, on and off for more than 10 years

## Former Treatments:

Master Anugoonpisarngit first was diagnosed with liver cancer more than ten years ago at Thonburi1 hospital. He was advised to address the mass when it was still small and treatable. As a result, he received the most expensive form of anti-angiogenesis injectable treatments at the time, and continually receives regular bi-annual monitoring at the hospital, up until present. Somewhere along the line he did not feel healthy and wished to avoid later needs for chemotherapy, so he consulted BVRC for more support. He received series of immunotherapy while having regular check-ups at the hospital for a few years. Furthermore, in 2018 we found out that he had active viral hepatitis, on top of hints for metabolic syndrome.

## Therapeutic Success

**The patient realizes a strong need to shift for better health; trusts completely in the protocols and follows with strong will.**

Master Anugoonpisarngit started off more than a decade ago after a medical treatment for liver cancer. He knew that only by malnourishing the visible mass through reducing blood supplies to it would not cure the disease. And there was a chance of it re-growing in his body if he would not begin to do something more about it. He knew BVRC founder at the time, and from learning what the Yod-Ying protocols (back then, neither well known nor systematically designated) would do in terms of supporting and strengthening immune functions while regaining genuine health, he opted to enter the programs almost immediately.

After a matter of several months he felt an overall improvement and was inspired to take better care of his body further than only addressing cancer and doing immunotherapy. Somehow, he knew that chemical drugs being prescribed to him from a hospital through regular follow-ups would not do much good long term, so he chose not to take them at all. Rather, he continued on the medicaments manufactured by BVRC research center which he said was proven through himself of how well he felt along the therapeutic journey. Slowly, within a matter of months, not only that the evidence of cancer growth disappeared, he began to learn what it means to feel good and making healthier choices.

Now, even though Master Anugoonpisarngit has been in remission for several years, he still relies on therapeutic regimens under the Yod-Ying Protocols from time to time while being regularly monitored with medical check-ups at a hospital. In 2018, out of curiosity, we tested out underlying viral infections as means of comprehensive physical outlook, we found Master Anugoonpisarngit having hepatitis B.

After all these several years check-ups at the hospital, no one has cared to test it out despite the fact that he had liver cancer. He mentioned having blood tests and regular scans annually, but no one ever mentioned anything. So, immediately he was put on another Yod-Ying Protocol's immunotherapy for viral hepatitis for a 4-month duration, with highly satisfactory results. Along the therapy, Master Anugoonpisarngit also was very obedient in adjusting his diets and lifestyles to tackle the quiet infections and taming down cancer cells, as well as ridding signs of metabolic syndrome. He adjusted to a diet filled with plant-based and fish menus; reduced intakes of sweets, fries, and oily dishes. He also up-regulated his daily physical movements to a lot of walking and cleaning up the temple areas!

**“I knew, a lot of synthetic chemical drugs would not do any good to the body in the long run. I was prescribed many from the hospital but did not take any of them.**

**...In the past, even I was younger, somehow I was weak and feeble”**

**“At my current age of 66 years, knowing I have grown much older but I feel better and healthier. I have much more strength and vitality. The diseases are gone and I continue to take good care of my healthy aging.”**

### Therapy duration under BVRC

On and off for several years. Each series of therapy brings along an outcome of better health and more realization, one area or the other.

### CURRENT STATE OF HEALTH: AUGUST 2019

In a much better strength and vitality than when he was younger. He is super positive and has great sense of humors while learning more and more of what foods are good for his body and what thoughts are good for his mind. A ritual monk turned much more active at the age of 66 years.

**“A state of positive mind & complete trust can always do wonders. This kind of fatal disease is also defeated by happiness and inner peace.”**
